PROJECTS

Mess Management System (Hackathon Project)

➔ This is the web application project using MERN Stack
➔ We have use ReactJS , NodeJS , ExpressJS , MongoDB , many react framework libraries and we also use the Mongo Aggregation pipeline for analysis.
➔ This project is all about to manage mess to track the student and inventory data. It also provide the QR code attendance to keep record of student. It helps mess authority to manage the inventory , set the menu , create new plans. It also helps student to see their previous record in mess.There is also the admin dashboard to manage all the things and analyze the record of mess.

Online Job Application System (CollegeProject)

➔ This is the web application project using the NodeJS , Express Framework
➔ We have use HTML , CSS , JavaScript , NodeJS , ExpressJS , MongoDB and pug template engine

.
